Editorial Review

Amazon.com Review

You won't write a word processor, database server, or telephony gateway in PHP, nor will you use the language for complex mathematical modeling. PHP is meant to solve the kinds of problems that the creators of dynamic Web sites encounter. The authors of *PHP Professional Projects* have solved some of the biggies for you. This book has considerable merit: the pages explain how to write product catalogs, shopping carts, session-tracking routines, and user-authentication utilities in PHP, often with the MySQL database server holding up the back end. If you're the sort of reader who wants a quick solution, you'll be happy to find the solutions on a companion Web site. If you want to learn from the authors (after all, similar solutions are free for the taking on SourceForge and other code repositories) you'll be fairly pleased as well, since there are several nice tutorials.

When it comes to the PHP code listings in this book, you'll either be impressed by the spacious layout with plenty of room for notes, or aghast at the amount of space taken up by uninterrupted, uncommented stretches of code. Either way, the code is solidly written--it's efficient and worth studying as part of your educational effort--but some weird and unnecessary line breaks damage the flow a bit. The main point: this is a book of solutions that work, with long code listings for people who like to study that way. --*David Wall*

Topics covered: Solving common Web site problems with PHP and MySQL. Sections address the fundamentals of PHP and MySQL, but the authors quickly transition into full applications: a shopping cart, a user authenticator, an e-mail sender, and a graphics-file manipulator are among the best.

About the Author

Ashish Daniel Wilfred is Microsoft Certified in Visual Basic 6.0, Visual C++, Windows NT 4.0 Server, and Windows NT Workstation 4. He has worked for the past three years at NIIT Ltd. For the past two years, he has been working as a development executive in the Knowledge Solutions Business (KSB) division of NIIT. It is most important to arrange you to ultimately make your knowledge are still change. Let's try to choose correct ways for you.

David Smith:

As a pupil exactly feel bored to reading. If their teacher expected them to go to the library in order to make summary for some reserve, they are complained. Just tiny students that has reading's soul or real their hobby. They just do what the teacher want, like asked to the library. They go to at this time there but nothing reading seriously. Any students feel that looking at is not important, boring along with can't see colorful pictures on there. Yeah, it is being complicated. Book is very important to suit your needs. As we know that on this era, many ways to get whatever you want. Likewise word says, ways to reach Chinese's country. So , this PHP Professional Projects can make you sense more interested to read.
