### Editorial Review

From School Library Journal

Grade 4–8—Sidebars and photos dominate this highly visual survey. The first two thirds of the book are devoted to the history of thought and research on evolution, from stories of Creation, through Darwin, to genetics. The last third looks at "Evolution in Action." Information on the fetuses of related species rubs shoulders with variations within species and a time line of the Earth. Visually, the book snaps with colored backgrounds, cool graphics, topflight photos, and clever word balloons coming from vintage black-and-white reproductions. Suggested activities are worth trying, and a guessing game on related species does a fine job of enhancing understanding of the concept of evolutionary lines. Browsers will enjoy dipping in and out, but the book reads surprisingly well straight through, and readers who devour it whole will learn a great deal.—*Ellen Heath, Easton Area Public Library, Easton, PA*

\*Starred Review\* Dense with exciting scientific detail, this large picture-book-size volume focuses in its first half on Darwin's discoveries and theories, and the excitement and the controversy that they generated in his time. Then biologist Winston goes on to discuss the modern science of genetics and evolutionary biology, including what Darwin did not consider and what he knew little about; the many new discoveries that prove Darwin right and that continue to fuel debate; and the role of DNA in helping to fill in the gaps. The clear, interactive, double-page spreads in the publisher's signature style pack in a wealth of very technical information with lots of gorgeous color photos, screens, and boxed inserts. Also included is a detailed six-page time line of the planet over four million years. Readers can browse through and delve into the geology and biology facts that grab them, and then follow some of the "Now try this!" suggestions, such as "How to find out what was living in your neighborhood 250,000 years ago." As accessible as it is informative, this is a great title for classroom browsing and sharing. Grades 5-8. --Hazel Rochman

Review

With big, bold collages comprised of photographs, shifting text sizes and fonts, and all manner of quirky scientific presentations, this is a very compelling look at Darwin, the work of other naturalists and their work. . Winston discusses why some animals are born with reduced pigment and how similar animals evolve differently in different locations. Subjects as diverse as Gregor Mendel's pea plant experiments to the evolution of bee colonies is explored on vividly colored double-page spreads that draw the reader in with irresistible graphics and slowly, unpretentiously, lead the curious along a grand scientific story. DK continues to impress me with their 21st century design that has transformed the encyclopedia format. Winston is a perfect partner for this study on evolution that concludes in the modern era and brings Darwin and his research into our everyday lives. I can't recommend Evolution Revolution enough as the book for kids studying Darwin and an excellent supplement to the dreariness of the average earth science classroom. Well done! --Bookslut.com

### Users Review

From reader reviews:

**Mark Frey:**

Do you have favorite book? In case you have, what is your favorite's book? Guide is very important thing for us to learn everything in the world. Each publication has different aim as well as goal; it means that book has different type. Some people truly feel enjoy to spend their time and energy to read a book. They are really reading whatever they acquire because their hobby is reading a book. How about the person who don't like reading through a book? Sometime, person feel need book when they found difficult problem as well as exercise. Well, probably you should have this Evolution Revolution (Big Questions).

**Bryce Adams:**

Is it you actually who having spare time then spend it whole day by means of watching television programs or just lying down on the bed? Do you need something new? This Evolution Revolution (Big Questions) can be the response, oh how comes? A fresh book you know. You are thus out of date, spending your time by reading in this brand new era is common not a nerd activity. So what these publications have than the others?

**Lauren Allison:**

As a university student exactly feel bored to reading. If their teacher requested them to go to the library or even make summary for some reserve, they are complained. Just tiny students that has reading's heart and soul or real their pastime. They just do what the teacher want, like asked to the library. They go to there but nothing reading seriously. Any students feel that studying is not important, boring and also can't see colorful photographs on there. Yeah, it is for being complicated. Book is very important for yourself. As we know that on this time, many ways to get whatever we would like. Likewise word says, many ways to reach Chinese's country. Therefore , this Evolution Revolution (Big Questions) can make you feel more interested to read.

**Jonathan Carney:**

What is your hobby? Have you heard that will question when you got college students? We believe that that query was given by teacher for their students. Many kinds of hobby, All people has different hobby. And you also know that little person similar to reading or as reading become their hobby. You have to know that reading is very important and book as to be the issue. Book is important thing to incorporate you knowledge, except your current teacher or lecturer. You get good news or update with regards to something by book. A substantial number of sorts of books that can you take to be your object. One of them is actually Evolution Revolution (Big Questions).
